AUTOMATIC CHEMICAL FEEDER

In order to keep the water in a swimming pool clean and in optimum hygienic condition, the correct dosage of chemical products is essential.

KLOR-DOS automatic chlorine feeders are one of the easiest way to provide a reserve of slow dissolving TCCA to meet the disinfection requirements of commercial and residential pools and spas.

KLOR-DOS chlorine feeders accommodate standard 3" TCCA tablets and work automatically with the pool water circulation system.

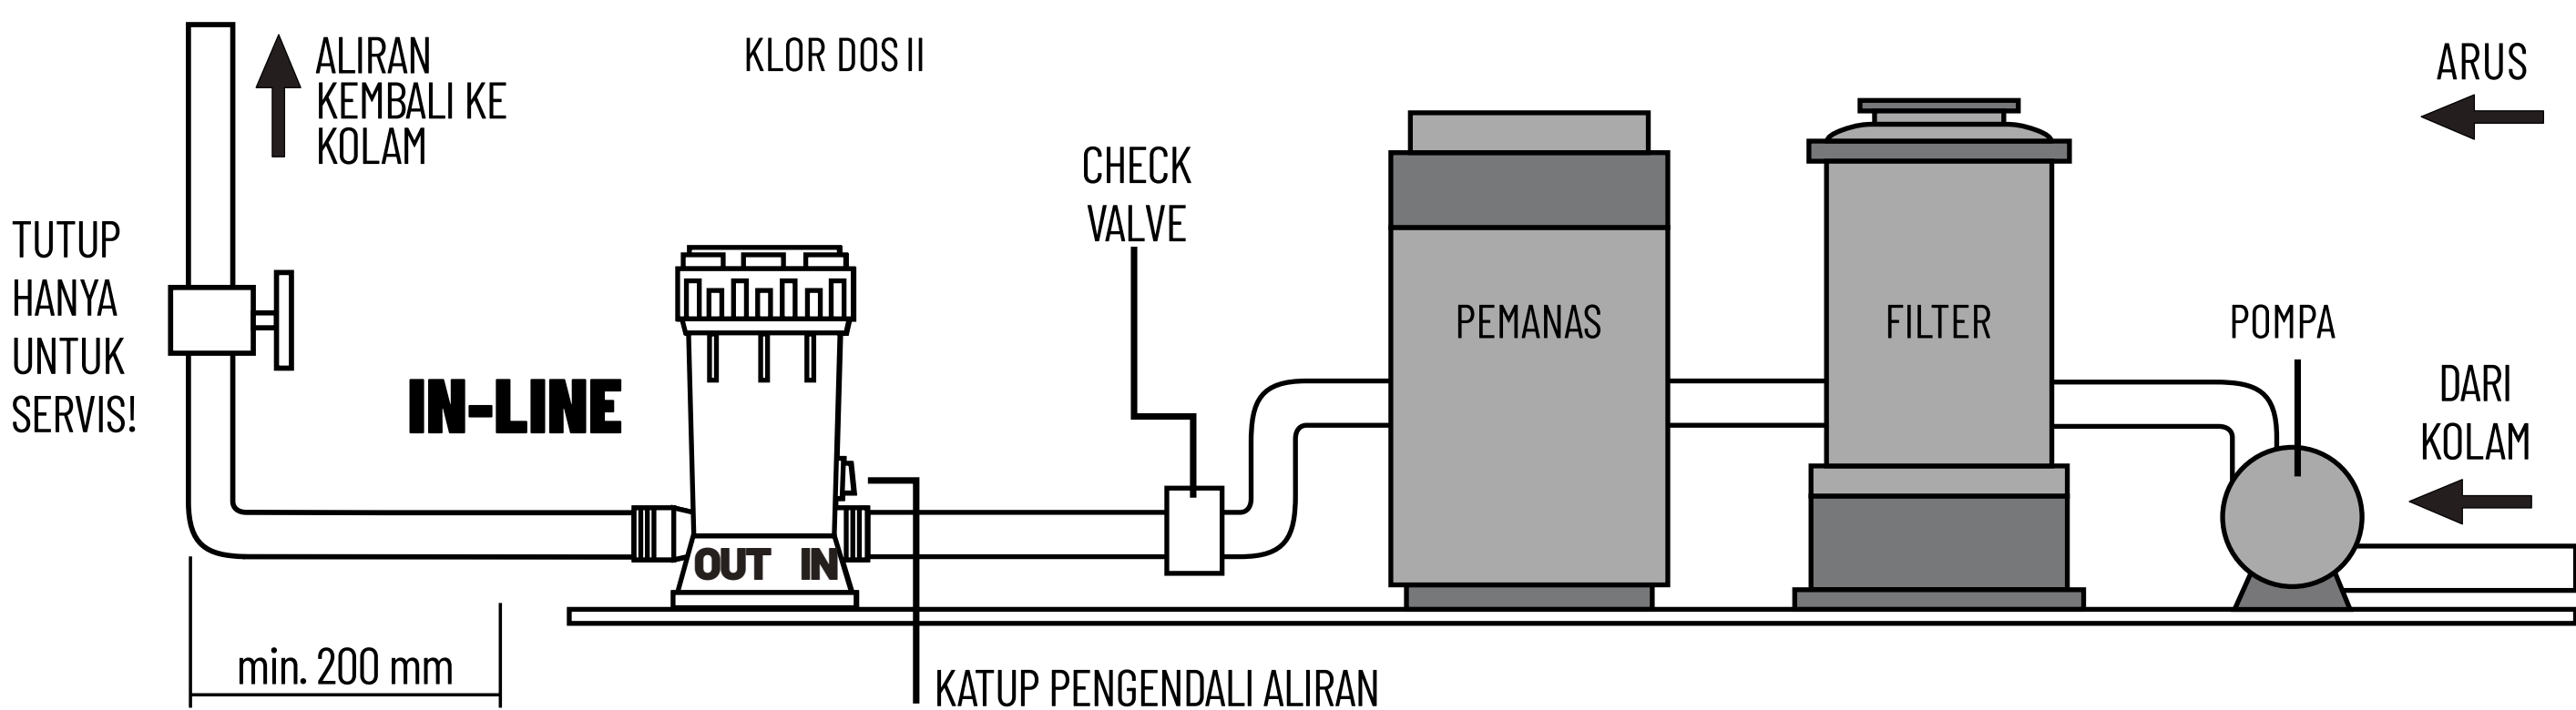

KLOR-DOS-II is suitable for in-line and off-line installation.

KLOR-DOS-XL is designed for off-line and by-pass plumbing installations..

Ref.	Deskripsi	Jenis instalasi			Ukuran pipa	Kubikasi
		In-line	Off-line	By-pass	off-line	Kolam renang
KLOR-DOS-II	Automatic chemical feeder, 1,9 kg, 1,5" water mur, w/ katup terintegrasi	ya	ya	ya	½"	95 m ³
KLOR-DOS-XL	Automatic chemical feeder, 10 kg, 1,5" water mur w/o katup terintegrasi	tidak	ya	ya	1"	500 m ³

Untuk setiap metode pemasangan, sangat penting untuk memastikan bahwa katup saluran balik kolam dan katup flow control tetap terbuka untuk mencegah penumpukan gas di feeder klorin - kecuali saat membuka unit / melakukan servis.

Selalu pasang feeder klorin pada posisi di belakang pemanas. Jika tidak ada pemanas, pasang di belakang filter. Pemanas atau filter dapat mengalami kerusakan jika terkena aliran klorin terkonsentrasi.
